# *Allergy Skin Test Consent*

Allergy skin testing is an important diagnostic tool used by medical providers to accurately diagnose the source of allergic reaction. Correct diagnosis through testing that identifies the specific antigens causing your symptoms is an important first step to providing you with the best and most complete range of treatment options.

By managing allergic conditions, you may reduce the number of days you miss work or school, and you may eliminate (or lessen the severity of) symptoms such as attention deficit and impaired ability to concentrate.

The skin test is performed by the same process used in an allergist's office: placement of multiple antigens on the back or other body part, to be determined by your provider, with a plastic skin test applicator. This test is extremely accurate and results are read in 15 minutes.

There is a low risk of persistent itching or discomfort, and an extremely low risk of anaphylaxis associated with skin testing.

The cost of test varies by health plan, but most health plans cover the test in-network. Please note that insurance deductibles, co-insurance and co-payments may apply. If the test is not covered by your insurance plan, you will be responsible for the cost of the test.

**Please confirm that you understand the reasons for the test as well as the potential benefits and risk involved:**
